📍 Dunwoody, Georgia

SUMMARY

Master's student in Information Systems (GPA: 3.7) with experience in Java application development and a strong foundation in Object-Oriented Programming, Data Structures, SQL, and software development principles. Skilled in Java, Python, Git, and AWS fundamentals, with a passion for building scalable backend applications and growing as a Software Development Engineer.

PROFESSIONAL EXPERIENCES

Java Developer Intern

Fratello InnoTech Pvt Ltd | Hyderabad | May 2023 – June 2023

- Developed an Online Voting System using Java and Object-Oriented Programming principles.
- Implemented authentication, vote validation, and backend business logic.
- Participated in debugging and troubleshooting application issues to improve system reliability.
- Collaborated with developers to understand software development lifecycle practices and code quality standards.
- Utilized version control concepts and documentation throughout the development process.

AI & CLOUD INITIATIVES

Graduate Research & Development | Central Michigan University | Jan 2025 – Aug 2025

- Exploring integration of LLM-based AI tools for automated data insights.
- Studying generative AI frameworks and prompt engineering concepts.
- Building Python automation scripts to improve workflow efficiency.
- Actively developing cloud-ready applications using AWS best practices.

EDUCATION

2024 – 2026

Masters in Information systems

Central Michigan University

2020 – 2024

Bachelors in Electronics and Instrumentation Engineering

Velagapudi Rama Krishna Siddhartha Engineering college

TECHNICAL SKILLS

Programming Languages: Java, Python, C, **Backend Development:** Core Java, Object-Oriented Programming (OOP), Data Structures & Algorithms, REST API Concepts, **Frameworks:** Spring Framework (Learning), Spring Boot (Learning), **Databases:** SQL, MySQL, **Version Control:** Git, GitHub, **Cloud:** AWS Fundamentals (EC2, S3), **Tools:** VS Code, Linux.

PROJECT EXPERIENCE

AI-Enhanced Data Dashboard (Python + Tableau Integration)

- Designed a data visualization dashboard to analyze structured datasets and generate actionable insights.
- Integrated Python-based preprocessing logic to clean and transform raw data before visualization.
- Applied data visualization best practices to create interactive dashboards.
- Explored integration of AI-generated summaries to enhance decision-making insights.

Technologies: Python, Tableau, Data Analytics

Online Voting System (Java Application Development)

- Developed a secure voting platform using Java and OOP concepts.
- Implemented user authentication and vote validation workflows.
- Applied debugging and testing techniques to ensure application accuracy and reliability.

IT Asset Management System (Backend + Cloud Concepts)

- Designed a backend-driven system to manage and track organizational IT assets.
- Utilized structured data models and SQL concepts for efficient asset management.
- Implemented modular design principles for maintainability and scalability.

Technologies: Java, SQL, AWS Concepts
